

EQACC SOLAR

North America PV Energy Storage Ratio

Overview

How much solar power did the US install in 2025?

LAS VEGAS and WASHINGTON, D.C. — The U.S. solar industry installed nearly 18 gigawatts (GW) of new capacity in the first half of 2025. Even as the Trump administration rolled out a series of anti-clean energy policies, solar and storage still accounted for 82% of all new power added to the grid in its first six months.

What percentage of solar power is owned by nonutility generators?

A large majority (88%) of capacity in development is owned by nonutility generators. For the fourth year in a row, solar was the leading source of new utility-scale capacity. In 2024, over 30,000 MW of solar capacity came online, which is a 30% increase in operating solar capacity.

How many MW of energy storage will come online in 2025?

Additionally, 15,306 MW of energy storage are scheduled to come online in 2025. The largest share of capacity slated to come online in 2025 is from solar facilities (74%). Wind capacity makes up the next largest portion of projected new capacity in 2025 at 18%, and natural gas makes up 7%.

What is the largest solar project in the United States?

With a planned photovoltaic capacity of 690 megawatts (MW) and battery storage of 380 MW, it is expected to be the largest solar project in the United States when fully operational. Battery storage. We also expect battery storage to set a record for annual capacity additions in 2024.

North America PV Energy Storage Ratio

Solar and storage represent 91% of clean power additions in ...

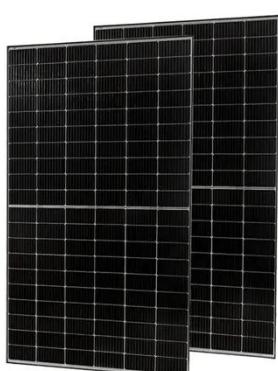

Of the 11.7 GW of clean power capacity added in Q3 2025, utility-scale solar and battery energy storage accounted for 91% of the total, said a report from the American Clean ...
