# North Korean Off-Grid Solar Container Earthquake-Resistant Type

## Overview

---

Are solar panels being used in North Korea?

The importation and use of solar panels in North Korea have significantly increased, especially following the 2012 Pyongyang International Trade Fair. In 2015, North Korea began building small scale wind turbines that generate between 100 and 300 watts of power.

How will solar power help North Korea's rural communities?

Solar panels and wind turbines are off-grid energy sources, meaning that their generated energy will be able to power nearby rural communities rather than large military and industrial sites. This will be especially helpful to improve the living standards of North Korea's rural residents.

Does North Korea have a good energy sector?

North Korea's energy sector requires a lot of attention. North Korea struggles to meet energy demands as domestic energy production and consumption have been generally declining for years. As of 2020, 48% of the North Korean population did not have access to electricity, and in 2016, only 10.8% had access to clean fuel for cooking.

Why did North Korea lose energy?

North Korea relied heavily on the Soviet Union for subsidized oil, and the country's energy production and consumption rates dipped following the Soviet Union's dissolution. The absence of these energy subsidies, aging infrastructure and a poor national grid system caused North Korea's energy sector and economy to fall behind.
