# **Notification on the monitoring of battery registration for solar container communication stations**

## Overview

---

This paper examines the development and implementation of a communication structure for battery energy storage systems based on the standard IEC 61850 to ensure efficient and reliable operation. It explore.

Can a Bess be used with a battery energy storage system?

Measurements of battery energy storage system in conjunction with the PV system. Even though a few additions have to be made, the standard IEC 61850 is suited for use with a BESS. Since they restrict neither operation nor communication with the battery, these modifications can be implemented in compliance with the standard.

How does the control center communicate with the PV system?

The control center communicates with the PV system by a Modbus protocol and with the BESS by IEC 61850. The IEC 61850 data structures provided by the BESS were created beforehand by a configuration file. Fig. 5 presents a schematic of this structure. Fig. 5. use case “meeting the supply forecast”.  
5.1. Constraints on implementation.

How do I add a notification to Sunny portal?

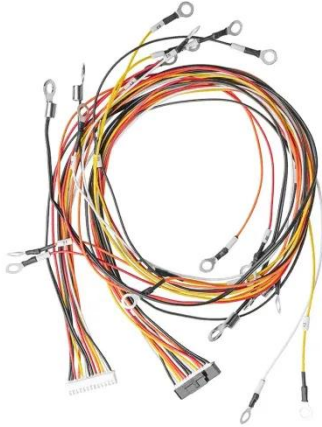

Log into Sunny Portal. Select system, system group or system section. Select the menu Configuration. In the context menu, select [Notifications]. To add a new notification, click the button . To configure a notification, click the button . Configure notification and confirm with [Save].

How do I configure a sunny portal alarm?

The alarm informs you about events regarding grounding faults, residual current and the grid disconnecting device according to the standard IEC 62109-2 / DIN EN 62109-2. Log into Sunny Portal. Select system, system group or system section. Select the menu Configuration. In the context menu, select [Notifications].
