Payment and settlement of base station energy hosting

Overview

Are base stations a threat to the safe operation of electric network?

Abstract: The ultra-dense deployment of base stations (BSs) results in significant energy costs, while the increasing use of fluctuating renewable energy sources (RESs) threatens the safe operation of electric network (EN). These issues can be addressed by coordinating BSs' active/sleep states with RES generation.

How does a cash settlement work?

In a cash settlement, the Exchange will credit or debit the profits or losses of the parties calculated based on the final settlement price and close their open positions in the expired contract after market close on the last trading day of the contract.

What is a settlement price?

1. if, by the close of the trading day, there are bids or asks in the Exchange's central order book, the median quote among the best bid, the best ask and the settlement price of the previous trading day will be the settlement price for the contract;
