# Peak and valley energy storage device prices

## Overview

---

How do C&I energy storage projects benefit from Peak-Valley arbitrage?

C&I energy storage projects in China mainly profit from peak-valley arbitrage while reducing demand charges by monitoring the inverters' power output in real time to prevent transformers of industrial parks from exceeding their capacity limits.

Why is the C&I energy storage sector growing?

Since July, as the country experienced peak electricity demand, more and more provinces have varied electricity charges for different seasons, expanding the peak-to-valley spread and fostering growth in the C&I energy storage sector.

How much does a kWh cost in Guangdong?

In the five cities of the Pearl River Delta of Guangdong, the peak price was RMB 1.49/kWh, and the trough price was RMB 0.289/kWh, meaning a peak-to-trough gap of RMB 1.2/kWh, making Guangdong the province of the largest peak-to-valley spread as of mid-2023.

How long does a C&I energy storage take to pay back?

Results of the assessment are as follows. As shown in the chart below, given a peak-to-valley spread as high as RMB 1.2/kWh, a C&I energy storage with one charge-discharge cycle a day in the five cities will need a payback period of eight to nine years.
