## Overview

---

Why is the peak-to-Valley electricity price gap widening?

As the share of renewable energy in the energy system increases, the peak-to-valley electricity price gap may widen due to the declining in the cost of renewable energy generation costs or narrow, or may narrow due to the increasing in grid dispatch costs .

How do C&I energy storage projects benefit from Peak-Valley arbitrage?

C&I energy storage projects in China mainly profit from peak-valley arbitrage while reducing demand charges by monitoring the inverters' power output in real time to prevent transformers of industrial parks from exceeding their capacity limits.

Why are battery energy storage systems so popular?

Among the energy storage technologies, the growing appeal of battery energy storage systems (BESS) is driven by their cost-effectiveness, performance, and installation flexibility [, , ].

How does Bess optimize peak-valley price differentials?

The optimization results indicate that, while meeting the load demands, BESS needs to discharge during peak and off-peak electricity price periods and charge during valley-price periods to achieve the optimal unit electricity cost for the system, thereby maximizing peak-valley price differentials.
