

**EQACC SOLAR**

# **Portable adjustable power LCD**

## Overview

---

Are portable devices transforming industries?

Portable devices have become essential tools across various sectors, pushing advancements in display technology with a focus on energy efficiency. From medical to military, aerospace to industrial, and commercial to transportation, ultra-low power consumption displays are transforming industries.

What are LCD/OLED power units (PSUs)?

ST's LCD/OLED Power Units (PSUs) add value to new designs by simplifying power-supply circuitry and maximizing battery life. Our PSUs support feature-rich portable products due to their embedded energy-saving features.

What is a dual LCD display & why is it important?

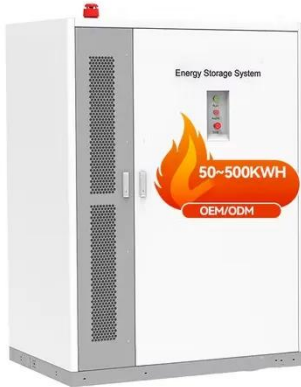

This dual feature is invaluable in medical and industrial fields, where clear readability is essential regardless of ambient light. Transflective LCD displays have become critical in portable medical devices and industrial control systems, optimizing visibility and conserving power for reliable and efficient use.

What are reflective LCD displays & transflective LCD displays?

These displays enable devices to operate for extended periods with high performance in various lighting conditions. Reflective LCD display and transflective LCD technologies enhance usability while minimizing energy needs, ensuring reliable functionality in demanding environments.
