Price factors of solar panels

Overview

What factors affect the price of solar panels?

The price of solar panels is a significant consideration when purchasing them. Normally, prices are measured in solar price per watt. Solar panels are rated by their wattage and efficiency. A panel's wattage is how much power it is expected to generate.

Do solar panels cost a lot?

Solar panels are one of the most cost-effective ways to generate electricity. They can be used to power your home, business or farm and will save you money on your monthly energy bill. There are many factors that can affect the cost of solar panels, including your home's location, the size of your roof, and how much energy you need to generate.

What factors determine the cost of a solar panel?

The cost of a solar panel is determined by several factors, including the capacity of the solar panel, the technology it's built on, the variant or model of the solar PV panel, its quality, and the manufacturer and brand.

Where did photovoltaic cost data come from?

Photovoltaic cost data between 1975 and 2003 has been taken from Nemet (2009), between 2004 and 2009 from Farmer & Lafond (2016), and since 2010 from IRENA. Prices from Nemet (2009) and Farmer & Lafond (2016) have been converted to 2024 US\$ using the US GDP deflator, to account for the effects of inflation.
