# **Price of emergency inverter**

## Overview

---

What is an emergency inverter system?

Inverter systems are made up of a set of DC batteries and electronics that can convert the DC power from the batteries into an AC power source needed for the emergency lighting loads. Emergency inverter systems will provide enough emergency AC power for the required time to exit the building if necessary.

How do I use an inverter for emergency power?

A very simple way to use an inverter for emergency power (such as during a power outage), is to use a car battery (with the vehicle running), and an extension cord running into the house, where you can then plug in electrical appliances. More Questions?

(Back to FAQ).

How do emergency lighting inverters work?

Emergency Lighting Inverters ensure uninterrupted power to devices in times of power outages for a lighting systems. They do this using a battery system that converts DC to AC voltage via electronic circuitry. The UL924 standard requires a minimum of 90 minutes of emergency back up power.

What is an emergency lighting backup inverter?

An emergency lighting backup inverter is a device that converts DC battery power to standard AC voltages to provide backup for various lighting systems, including fluorescent and LED lights, in an emergency.
