Price of new energy storage box in the UK

Overview

How is the UK's solar energy and battery storage sector changing?

Introduction The UK's solar energy and battery storage sector is undergoing a rapid transformation, bolstered by ambitious climate targets and supportive policies. Solar photovoltaics (PV) capacity has rebounded since the end of feed-in tariffs, while energy storage is scaling up to enhance grid reliability.

Can the UK become a leader in energy storage?

Energy storage, meanwhile, has opportunities beyond just lithium batteries – the UK can become a leader in emerging storage tech such as flow batteries, hydrogen storage, and gravity-based systems (several prototypes are being trialled, supported by government innovation grants).

How much does a kilowatt-hour of storage cost?

However, a more precise way to assess their value is by using the £/kWh metric, which stands for price per kilowatt-hour of storage. This pricing can vary between £265 and £415 per kWh. The more affordable options often come from Chinese importers, while the higher end of the spectrum features premium brands like Tesla from the United States.

How big is battery storage capacity in 2024?

Operational battery storage capacity has surged past 4–5 GW in 2024, compared to virtually nothing a few years ago. The pipeline of upcoming projects is enormous – nearly 96 GW of battery capacity is at some stage of development (operational, under construction, consented or planned) as of 2024, an increase of 67% year-on-year.
