Overview

What is the packaging structure of phase change cold storage materials?

And the existing reviews rarely involve the packaging structure of phase change cold storage materials used in cold chain transportation. The packaging of cold storage agent mainly includes cold storage plate, cold storage bag and cold storage capsule [10].

What is phase change cold storage material?

Phase change cold storage material is a kind of material which can provide latent heat by changing the phase state of the material while maintaining the system environment temperature. According to the phase change state of materials, they can be divided into four types: solid-solid, solid-gas, liquid-gas and solid-liquid.

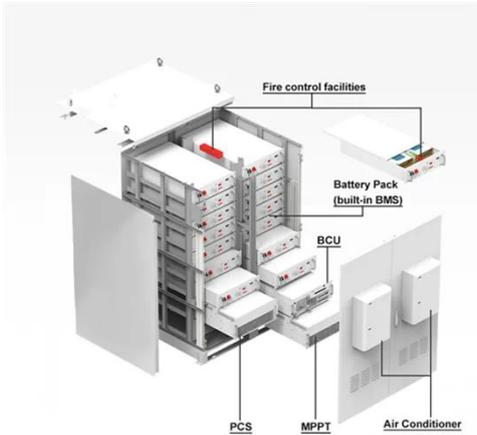

Can microencapsulated phase change materials be used in food and medicine?

The application of microencapsulated phase change materials in food, medicine and other important fields is limited. Compared with the traditional phase change materials, the phase change microcapsule materials have more and more advantages.

Which polymer materials are used in phase change material microcapsules?

At present, polyurethane, trim ethoxyamine formaldehyde resin, aldehyde resin and other polycondensation polymer materials are mostly used in the preparation of phase change material microcapsules.
