# Price quote for grid-connected energy storage containers used in US ports

## Overview

---

Which energy storage technologies are included in the 2020 cost and performance assessment?

The 2020 Cost and Performance Assessment provided installed costs for six energy storage technologies: lithium-ion (Li-ion) batteries, lead-acid batteries, vanadium redox flow batteries, pumped storage hydro, compressed-air energy storage, and hydrogen energy storage.

How much money does energy storage make in 2022?

The U.S. market for energy storage reached USD 64.9 billion, USD 81.9 billion and USD 106.7 billion in 2022, 2023 and 2024 respectively. The pumped hydro technology battery uses excess electricity to pump water from lower to upper reservoir. The technology offers longer duration storage.

Will additional storage technologies be added?

Additional storage technologies will be added as representative cost and performance metrics are verified. The interactive figure below presents results on the total installed ESS cost ranges by technology, year, power capacity (MW), and duration (hr).

Why are energy storage costs so high – irrational?

Within energy storage, fears of critical raw material shortages in the face of soaring EV demand (with growth rates of 60%) led to “irrational buying behaviour”, Shreve said, leading to a 270% increase in lithium carbonate costs from Q3 2021 to Q4 2022.
