# Production of dual solar container lithium battery packs

## Overview

---

What is a lithium ion battery pack?

A battery pack consists of multiple cells connected in series or parallel. How to make lithium-ion batteries?

It's always been an interesting topic. The production of lithium-ion batteries is a complex process, totaling Three steps. The cell sorting stage is a critical step in ensuring the consistent performance of lithium-ion batteries.

What is the battery pack manufacturing process?

The battery pack manufacturing process involves cell selection, module assembly, wiring, thermal management, and safety integration. Each step ensures efficiency, reliability, and durability. Understanding this process helps manufacturers optimize production, clients get tailored solutions, and consumers receive safer, longer-lasting batteries.

Will modularity halve the cost of a single battery pack?

Modularity remains a good solution for the design of customized batteries. However, the series production for automotive requires new cost-effective solutions. Therefore, new CTC and CTP approaches will be proposed in the next future, together with customized manufacturing factories, to halve the cost of a single battery pack.

How are lithium-ion batteries made?

Battery modules for lithium-ion batteries consist of several battery cells that are connected to each other. Their production takes place in automated assembly lines (partly under dry room or cleanroom conditions). Very high speed and precision as well as maximum cleanliness are important factors for economical production of the modules.
