

EQACC SOLAR

Protective solar glass

Overview

What is cover glass for solar panels?

Cover glass for solar panels is a crucial component that serves as a protective barrier for the photovoltaic cells, which convert sunlight into electricity. It is typically made of tempered glass, specially treated to be more durable and resistant to environmental stressors.

Why do solar panels have tempered cover glass?

The minimal thickness of AGC's tempered cover glass also contributes to the overall efficiency of solar panel systems. The thinner glass allows more sunlight to reach the photovoltaic cells, increasing the panels' energy conversion efficiency.

What is photovoltaic smart glass?

Photovoltaic glass, also known as solar glass or transparent solar panels, is a type of smart glass that uses embedded photovoltaic cells to convert sunlight into electricity to generate electricity.

Why is solar glass a good choice?

Glass is a durable, highly transparent material making it an obvious choice for solar energy applications. Our extra clear solar glass offers superior solar energy transmittance and is stable under solar radiation. It also survives harsh environmental conditions and protects the sensitive components of solar modules from water and humidity ingress.
