# **Purchase of rooftop solar panels**

## Overview

---

What is rooftop solar power?

Rooftop solar power, also known as rooftop photovoltaic (PV) systems, refers to solar panels installed on residential or commercial building rooftops to generate electricity. These systems convert sunlight directly into electrical energy through photovoltaic cells, providing clean, renewable power for your home or business.

What are the different types of rooftop solar PV systems?

The three main types of rooftop solar PV systems are off-grid rooftop solar systems, on-grid rooftop solar systems and hybrid solar systems (grid-tied with battery). Off-grid rooftop solar systems include a solar battery to store excess energy, so owners have backup power during periods of low sun.

Are rooftop solar systems a good investment?

Rooftop solar systems entitle owners to many financial benefits, like saving money on electricity bills, increasing the value of the property, and receiving tax credits. Rooftop solar systems enable property owners to be partially or fully 'energy independent,' switch to renewable energy, and reduce carbon emissions.

How do you install a rooftop solar PV system?

Take the wires from each solar panel and connect them to the solar inverter, which converts the electricity generated by the array from DC into AC, and then connect the solar inverter to the electrical panel. What are the things to consider before installing Rooftop Solar PV Systems?
