

**EQACC SOLAR**

# **Ranking of domestic communication green base station suppliers**

## Overview

---

Are green LTE base stations a good idea?

With global telecom emissions under scrutiny, the demand for green LTE base station technologies is accelerating. Startups can capitalize on this by offering low-power amplifiers, solar-powered LTE sites, and advanced cooling systems that reduce operational carbon footprints.

Should China upgrade to low-carbon base stations?

These outcomes demonstrate that upgrading to low-carbon base stations not only ensures economic feasibility but also delivers significant environmental and public health benefits, reinforcing the strategic value of decarbonizing China's communication infrastructure.

Do communication base station operations increase electricity consumption in China?

Comparing data from 2021, 2025, and 2030, 41 we found that the electricity consumption due to communication base station operations in China increased annually.

Can low-carbon communication base stations improve local energy use?

Therefore, low-carbon upgrades to communication base stations can effectively improve the economics of local energy use while reducing local environmental pollution and gaining public health benefits. For this research, we recommend further in-depth exploration in three areas for the future.

## Ranking of domestic communication green base station suppliers
