

EQACC SOLAR

Reykjavik Lead Carbon Energy Storage Power Generation Project

Overview

How does carbon Iceland use CO2?

At later stages, Carbon Iceland has planned a diverse portfolio of different CO2 sources, including DAC. By mixing CO2 with hydrogen, on a large capacity, Carbon Iceland is able to produce renewable fuels for engines that currently use fossil fuels.

What can carbon Iceland do for the maritime industry?

This will allow transportation industries to take giant steps, phasing out fossil fuels and converting to renewable fuels, without completely replacing engines of current fleet. Carbon Iceland is proud to collaborate with some of the largest fishing fleet operators in Iceland, providing them with renewable fuel for the maritime industry.

Why should we use renewable fuel in Iceland?

Usage for our renewable fuel in Iceland will secure our place as a leader in Iceland's Energy Transition. In addition, Carbon Iceland will also provide renewable fuels for export, directly to large offtakers in Europe and US.

How does Iceland get its electricity?

This significant achievement is primarily supported by hydropower, contributing more than two-thirds of the total electricity supply from the turquoise waters flowing through the nation's rivers and waterfalls. The remaining close to a third comes from geothermal energy, harnessing the Earth's heat beneath Iceland's volcanic landscape.
