

**EQACC SOLAR**

# **Roof solar glass model**

## Overview

---

### What is a solar roof?

Solar Roof is comprised of both glass solar tiles and steel roofing tiles. Glass solar tiles produce energy, while architectural-grade steel tiles add longevity and corrosion resistance to your roof. Both are durable, strong and engineered for all-weather protection.

### What are solar roof tiles?

Unlike traditional solar panels that are mounted on top of a roof, solar roof tiles replace the traditional roofing material itself, offering a seamless design that blends into the structure of your home. This innovative roofing system allows homeowners to enjoy the benefits of solar energy without compromising on aesthetics.

### Will solar roof tiles become a standard feature in residential homes?

As more consumers seek sustainable living options, integrated solar roof tiles will become a central component of eco-friendly home building and renovation. By 2025, solar roof tiles could become a standard feature in residential homes, offering an effective way to generate renewable energy while maintaining the aesthetic integrity of the property.

### How does a solar roof work?

Glass solar tiles and architectural-grade steel tiles, vent covers and ridge caps come together to form a roof that is both durable and powerful. Combine your Solar Roof with Powerwall—a home battery featuring an integrated solar inverter for increased efficiency and dependable energy storage 24/7.
