

EQACC SOLAR

Seoul Mobile Energy Storage Site Inverter Grid Management

Overview

Where in South Korea is a solar PV project located?

Located in a 2.96 million square meters mountainous site in Daemyeong, Yeongam, about 340 km south of Seoul, the PV project is a part of the South Korean largest hybrid energy system integrating PV, wind and energy storage, featuring agility within a complicated landform and high humidity environment.

Where is the largest solar project in South Korea?

The project, recently put into commercial operation, is in Yeongam, South Jeolla province, South Korea. It is noteworthy as one out of the only two solar projects of approximate 100 MW capacity in the country, and milestone application as of the largest hybrid energy systems in the region. Part of the Largest PV+Wind+Storage Complex in South Korea.

What is a large-scale smart grid project?

Large-scale smart grid projects in the range of tens of MW (MWh) based on PV, wind power, and energy storage systems (ESS) have been initiated by Korean companies both domestically and internationally.

Does Jeju Island have a power grid?

Jeju Island has favorable natural conditions for solar and wind power generation; however, it has a limited connection capacity in power grid. Due to the imbalance between electricity demand and supply, the island is actively conducting demonstration projects to introduce new technologies necessary operations and achieving carbon neutrality.
