

## EQACC SOLAR

# Serbian energy storage equipment export companies

## Overview

---

What factors drive the renewable trend in Serbia?

Factors driving the renewable trend in Serbia include EU accession-related requirements for Serbia to decrease thermal power generation and Serbia's commitments under the Energy Community Treaty and the Paris Agreement to reduce greenhouse gas emissions.

Where can wind energy be found in Serbia?

The greatest potential of wind energy in Serbia is in the area of the powerful "košava" winds such as South Banat and East Serbia, as well as on the eastern side of Kopaonik Mountain, Zlatibor, Pester, and mountain passes at altitudes above 800m; as well as in the valleys of the Danube, Sava and Morava.

What percentage of Serbia's electricity comes from coal?

Serbia's national power utility Electric Power of Serbia (EPS) produces nearly 70 percent of the country's electricity from coal and nearly 27% percent from hydropower, with approximately 4% coming from private developers in wind and solar energy. Serbia heavily subsidizes coal and electricity prices, inhibiting competition.

How much power does Serbia have?

It currently has a total capacity of approximately 3490 megawatts (MW) of renewables, with 2342 MW in hydropower in 2019 according to the European Energy Community. Serbia announced plans to install new hydropower plants and two existing dams, and to rehabilitate a further 15 existing power plants totaling around 30 MW with EBRD financing.
