Seychelles Power Generation and Energy Storage

Overview

What is the Seychelles energy plan?

It targets an ambitious transformation and diversification of the Seychelles' currently 85 MW diesel-dominated electricity generation capacity (on Mahé, Praslin and La Digue), aiming at replacing diesel generators with domestic and international public and private financing.

Will PV affect the small power system in Seychelles?

If Photovoltaic (PV) systems grow on the power system in Seychelles, issues such as the impact on system frequency due to PV output fluctuations are expected. There are concerns that it may prevent Seychelles from achieving its ultimate renewable energy goal of "15% renewable energy deployment rate by 2030.

What does the Seychelles government do?

The Seychelles Government is committed to providing adequate, reliable and affordable energy to meet future energy consumption needs and to underpin strong economic growth through consumable energy initiatives. The Seychelles enjoy favourable conditions for renewable energy (RE) resources, such as wind and solar.

Is a 100% renewable Seychelles power supply possible?

The study 'A 100% Renewable Seychelles' (Hohmeyer, 2016) indicates that a power supply solely from renewable sources is technically feasible. With regards to the three islands, Mahé as the main island enjoys the service of a reliable electricity system, which services practically every citizen and has very few downtimes.

Seychelles Power Generation and Energy Storage

INTEGRATED DESIGN

EASY TO TRANSPORT AND INSTALL,
FLEXIBLE DEPLOYMENT

Future role of wave power in Seychelles: A structured ...

The fast and accurate techno-economic optimisation of the capacities of renewable energy sources, energy storage technologies, hydrogen re-electrification, and the ...
