## Overview

---

What materials are used in flexible solar cells?

Thus, this paper focuses on exploring the diverse materials employed in flexible solar cells, such as amorphous silicon, copper indium gallium selenide (CIGS), organic photovoltaics (OPVs), and perovskites, each with its unique strengths and limitations.

Are silicon heterojunction solar cells flexible?

A study reports a combination of processing, optimization and low-damage deposition methods for the production of silicon heterojunction solar cells exhibiting flexibility and high performance.

Can c-Si substrate be used for flexible solar cells?

The use of c-Si substrate in flexible solar cells poses an intrinsic problem due to its rigid material characteristics. However, in recent years, flexible solar cells using thin c-Si wafers have become more attractive, achieving a higher PCE than that of emerging flexible solar cells.

Are silicon solar cells a mainstay of commercialized photovoltaics?

Nature 626, 105–110 (2024) Cite this article Silicon solar cells are a mainstay of commercialized photovoltaics, and further improving the power conversion efficiency of large-area and flexible cells remains an important research objective 1, 2.
