# **Single-phase power supply for mobile base station**

## Overview

---

What is a single phase power supply?

The type of AC supply where all the voltages in the system varies in a same sinusoidal pattern is called single phase power supply. It is delivered using only two wires i.e. the power wire also known as hot wire or live wire or line or phase wire and a neutral wire. The power flows between the phase and neutral wire through the load.

How to calculate sectional area of 5G power supply cable?

The Sectional area of the 4G power supply cable is calculated by 6mm<sup>2</sup>. The Sectional area of the 5G power supply cable is calculated by 16mm<sup>2</sup>. installed a DC/DC converter to increase the system 57V or 60V.

What is the coverage area of 5G high-frequency base stations?

The radius of coverage area of 5G high-frequency base stations will be less than one-tenth of that of 4G base stations, and the coverage area of 5G high-frequency base stations will be less than one percent of that of 4G base stations. The deployment of macro base stations is difficult and the site resources are not easy to obtain.

What does a 42 volt power supply mean?

42V. It means that if the voltage drop is more than 6V, the ICT equipment will be protected. It can be seen that when the length more than 120m in the 4G system and the length more than 70m in the 5G system, the ICT equipment will be off because the low voltage protection of the power supply system.
