

EQACC SOLAR

Slovenia 20 MW of solar power

Overview

How much solar power does Slovenia have?

This total includes 191.5 MW from residential systems, 100.8 MW from commercial and industrial projects, and 6.5 MW from municipal installations. The 2024 installation marked a significant decrease compared to the 486 MW added in 2023, bringing Slovenia's cumulative solar capacity to 1.4 GW.

What happened to Slovenia's solar market in 2024?

Slovenia's solar market slowed in 2024, but the residential segment maintained the largest share as it adjusted to the phase-out of net metering and a new electricity tariff system. Slovenia installed 298.8 MW of solar capacity in 2024, according to the Slovenian Photovoltaic Association (Združenje slovenske fotovoltaike).

How much solar power will Slovenia have by 2030?

In its report, issued a month ago, SolarPower Europe estimated that Slovenia could reach 6.2 GW in total solar power capacity by 2030. Of note, a record 55.9 GW was installed in Europe last year, 40% more than in 2022. The boom in photovoltaics is evident throughout the planet.

Which energy sources provide the most electricity in Slovenia?

Renewable energy sources other than hydropower (e.g., biofuels, solar PV, waste, and wind) together provided 3.5% of total electricity generation in 2019. Slovenia, both as an independent party and a member of the European Union, signed the Paris Agreement in 2016.
