## Overview

---

How much solar power does Slovenia have in 2024?

According to the Slovenian Photovoltaic Association, Slovenia installed 298.8 MW of solar capacity in 2024. This total includes 191.5 MW from residential systems, 100.8 MW from commercial and industrial projects, and 6.5 MW from municipal installations.

Does Slovenia have a solar energy program?

In January 2025, Slovenia's Ministry of Cohesion and Regional Development launched a 16 million euro program to support solar energy communities with projects of at least 100 kW capacity. This total includes 191.5 MW from residential systems, 100.8 MW from commercial and industrial projects.

How many solar panels did Slovenia install in 2025?

Slovenia installed 85 MW of solar in the first half of 2025, driven by growth in commercial and industrial (C&I) projects and utility-scale installations. The lowest total in four years reflects a sharp decline in residential installations, despite continued subsidies for residential hybrid systems.

What does Slovenia's new tariff system mean for solar?

In October 2024, Slovenia introduced a new tariff system that replaced peak and off-peak pricing with network fees that vary by time of day and season. This new system aims to encourage active consumption and is expected to boost investments in hybrid solar solutions.
