

Sodium-sulfur battery energy storage container installation

Overview

Why are sodium-sulfur batteries used in stationary energy storage systems?

Introduction Sodium-sulfur (Na-S) batteries with sodium metal anode and elemental sulfur cathode separated by a solid-state electrolyte (e.g., beta-alumina electrolyte) membrane have been utilized practically in stationary energy storage systems because of the natural abundance and low-cost of sodium and sulfur, and long-cycling stability , .

What is a sodium sulfur battery?

Sodium sulfur batteries produced by NGK Insulators Ltd. offer an established, large-scale energy storage technology with the possibility for installation virtually anywhere. With a wide array of advanced features, from large capacity to compactness, NAS battery is a welcome addition into the long-duration energy storage industry.

What is a standard NaS battery container?

A standard single NAS battery container has 1.45 MWh energy capacity. The containers are stackable, enabling utility scale energy storage systems. We supply containerized NAS battery systems: one standard 20-ft container has 1.45 MWh energy capacity. The compact form enables easy transportation and quick installation at our customers' sites.

Should NaS batteries be co-located with hydrogen production?

Not surprisingly, NAS batteries have been chosen in several recent projects for co-location with hydrogen production. Across the globe, testing and certification of energy storage technologies from cell to system level according to UL9540A and UL1973 standards is becoming crucial for bankability.

Sodium-sulfur battery energy storage container installation

BASF starts battery installation

BASF has started up a sodium-sulfur battery installation at its chemical complex in Antwerp, Belgium. Set up in shipping containers, the system has 5.8 MW h of capacity and ...
