

**EQACC SOLAR**

# **Solar High Quality Irrigation System**

## Overview

---

What is a solar-powered irrigation system?

Solar-powered irrigation systems (SPIS) are a clean technology option for irrigation, allowing for the use of solar energy for water pumping, reducing greenhouse gas (GHG) emissions from irrigated agriculture, and substituting fossil fuels as an energy source. SPIS's long-term viability is highly dependent on how water resources are managed.

Are solar powered irrigation systems a viable alternative energy source?

Solar powered irrigation systems (SPIS) provide reliable and affordable energy, potentially reducing energy costs for irrigation. Particularly in rural areas, where cost of diesel fuel is high or where reliable access to the electricity grid is lacking, they can provide a relatively flexible and climate-friendly alternative energy source.

What are the benefits of a solar-powered irrigation system?

Irrigation in remote areas – Unlike traditional electric or diesel-powered pumps, solar-powered systems work in off-grid locations, ensuring water access where conventional infrastructure is lacking. Eco-friendly – Solar energy is a clean, renewable resource, reducing carbon emissions and promoting sustainable farming.

Are solar-powered irrigation systems the future of Agriculture?

With the growing challenges of climate change, water scarcity, and increasing energy costs, farmers are searching for efficient and eco-friendly solutions to maintain crop production. One of the most promising advancements in agricultural technology is the solar-powered irrigation system.
