# Solar Onsite Energy Prices and China

## Overview

---

How many solar PV installations are there in China this year?

"Solar PV installations have maintained a quite high pace this year, and we had seen an average of over 18 GW of monthly installations this year in China till October," said Zhu Yicong, vice-president of renewables and power research at global consultancy Rystad Energy.

How much solar power will China install this year?

With the world's largest, most complete new-energy industry chain, China is expected to install 230 to 260 gigawatts of solar capacity this year, topping the record of 217 GW set last year, according to the China Photovoltaic Industry Association.

Will China set a new record for solar power installations in 2024?

China is on track to set a new record for solar power installations in 2024, driven by falling production costs and increased global interest in renewable energy, said industry experts and company executives.

How will China's new solar policy affect the solar industry?

China's PV installations therefore remain robust, with added capacity forecast at 310 GW for 2025 – half of expected global solar installations. Wind is not as influenced by the new policy as solar and storage, due to longer lead times.
