

EQACC SOLAR

Solar container battery integrated liquid cooling equipment

Overview

What is a composite cooling system for energy storage containers?

Fig. 1 (a) shows the schematic diagram of the proposed composite cooling system for energy storage containers. The liquid cooling system conveys the low temperature coolant to the cold plate of the battery through the water pump to absorb the heat of the energy storage battery during the charging/discharging process.

What is a container energy storage system?

Containerized energy storage systems play an important role in the transmission, distribution and utilization of energy such as thermal, wind and solar power [3, 4]. Lithium batteries are widely used in container energy storage systems because of their high energy density, long service life and large output power [5, 6].

What is container energy storage temperature control system?

The proposed container energy storage temperature control system integrates the vapor compression refrigeration cycle, the vapor pump heat pipe cycle and the low condensing temperature heat pump cycle, adopts variable frequency, variable volume and variable pressure ratio compressor, and the system is simple and reliable in mode switching.

How to choose a compressor for a container energy storage battery?

In view of the temperature control requirements for charging/discharging of container energy storage batteries, the selection of the compressor is based on the rated operating condition of the system at 45 °C outdoor temperature and 18 °C water inlet temperature to achieve 60 kW cooling capacity.

Solar container battery integrated liquid cooling equipment

Liquid-Cooling Battery System

EnerC+ is a containerized battery system integrated with a liquid-cooling system, utilizing CATL's advanced technology. It is designed for large-scale energy storage and efficient power ...
