

# Solar container communication station wind power company ranking

## Overview

---

Who are the biggest wind energy companies in the world?

Overview: Four out of the world's five biggest wind energy companies are Chinese; their leader in 2023 was Goldwind, which accounted for about 14% of the global market by order intakes in 2022.

Does Siemens have an offshore wind power plant?

The company established the world's first offshore wind power plant in 1991 and continues to be a large player in both the onshore and offshore spaces. As a market leader in connecting offshore wind to the grid, Siemens has 6.5GW connected to date and a further 4.5GW under construction.

Can wind energy save the world?

Governmental policies like China's 14th Five-Year Plan for Renewable Energy and the US's Inflation Reduction Act (IRA) are the driving forces behind wind energy, but additional support for integration and better bureaucracy is dearly needed. So while wind energy might not be perfect, it has the power to save the world.

Why did wind power become a major energy source in 2023?

Coupled with renewed energy insecurity, this spurred interest and investment in renewable energy in the 2000s. In 2023, wind power generated 7.8% of the world's energy, compared to just 0.2% in 2000. Its biggest hubs include China (which accounts for 65% of global wind capacity, so Wood Mackenzie), Europe, and the US.
