# **Solar container outdoor power exports to South America**

## Overview

---

Does South America have a photovoltaic solar system?

Just as with EV adoption, photovoltaic solar deployment varies greatly in South America: some countries have just started deploying it, while others have made it a core part of their systems for nearly a decade. But all (or at least most) are advancing rapidly towards its massive deployment.

Will solar be a big deal in South America?

By and large, South American countries are relatively sunny, relatively sparsely populated, and relatively stable, so as solar prices come down, expect solar deployments to increase dramatically even in countries that — for now — have been laggards in this transition. And with solar coming in, fossil fuels will start to go out.

Which country has the most solar power in Latin America?

Situated near the equator, Brazil is more advantaged thanks to ample sunlight and has emerged as the leading market leader in Latin America over recent years. This year, Brazil will have around 16.3-17.5 GW of PV demand, representing a 65% share in the region.

Will South America's solar energy capacity grow by 2050?

Furthermore, due to abundant resource endowment and enabling solid policies, South America's solar energy capacity alone is expected to grow by a factor of 40 by 2050 to more than 280 GW. In December 2022, Equinor reached a final investment decision on the 531 MW Mendubim solar project in Rio Grande do Norte, Brazil.
