# Solar energy replenishment containers slow

## Overview

How do scientists keep energy in reserve for lean times?

Researchers are designing new technologies, from reinvented batteries to compressed air and spinning wheels, to keep energy in reserve for the lean times. Sandia National Laboratories researchers Leo Small, back right, and Erik Spoerke, back left, observe as Martha Gross, front, works in an argon glove box on their lab-scale sodium iodide battery.

How can we solve the variability problem of solar and wind energy?

Solving the variability problem of solar and wind energy requires reimagining how to power our world, moving from a grid where fossil fuel plants are turned on and off in step with energy needs to one that converts fluctuating energy sources into a continuous power supply.

Why do Germany's solar and wind power plants need to be turned off?

When the sun is blazing and the wind is blowing, Germany's solar and wind power plants swing into high gear. For nine days in July 2023, renewables produced more than 70% of the electricity generated in the country; there are times when wind turbines even need to be turned off to avoid overloading the grid.

What happened to solar energy in January 2023?

But on other days, clouds mute solar energy down to a flicker and wind turbines languish. For nearly a week in January 2023, renewable energy generation fell to less than 30% of the nation's total, and gas-, oil- and coal-powered plants revved up to pick up the slack.
