Solar energy storage equipment requirements

Overview

To go solar, you'll need solar panels, inverters, racking equipment, and performance monitoring equipment—at a minimum. Depending on where you live, you may also consider a solar battery. What is energy storage?

Energy storage is a system that can help more effectively integrate solar into the energy landscape. Sometimes it is co-located with, or placed next to, a solar energy system, and sometimes the storage system stands alone.

What equipment do you need to go solar?

To go solar, you'll need solar panels, inverters, racking equipment, and performance monitoring equipment—at a minimum. Depending on where you live, you may also consider a solar battery. The components of a solar panel system are pretty simple.

Can solar energy be used for energy storage?

Solar power can be used to create new fuels that can be stored and later used to provide energy. Existing compressed air energy storage systems often use the released air as part of a natural gas power cycle to produce electricity.

Why is solar storage important?

Solar storage is important because it allows solar energy to contribute to the electricity supply even when the sun isn't shining. It also helps smooth out variations in solar energy flow on the grid, which are caused by changes in sunlight.
