# **Solar energy storage export enterprises**

## Overview

---

Why are China's Solar Exports reducing?

As more markets continue to adopt local content requirements (LCRs), China will start to face increasing constraints for solar exports. In response to growing LCRs, Chinese players are globalising manufacturing capacity to offset a loss in exports. Energy storage investors expand overseas footprint.

Does China's solar industry have a global reach?

In 2023, China achieved record photovoltaic export volume growth across all subcomponents, driving manufacturing expansion in emerging markets. Following Wood Mackenzie's recent presentation at the SNEC Solar PV Conference & Exhibition in Shanghai in June, we share our insights on the global reach of China's solar and storage industry.

What drives energy storage project development?

Globally, energy storage project development is increasingly driven by the utility-scale segment, with mandates and targeted auctions driving gigawatt-hour projects in markets like China, Saudi Arabia, South Africa, Australia and Chile.

Is China entering a new era of energy storage demand?

Mainland China accounts for most of the global energy storage demand, driven in the near term by regional requirements for new utility-scale wind and solar projects to include energy storage capacity. However, the Chinese market is entering an era of change.
