How much does solar cost?

After applying the 30% federal tax credit, net costs typically range from \$10,500 to \$24,500. Understanding solar costs requires grasping two key metrics: cost per watt and cost per kilowatt-hour (kWh).

How much does a solar system cost in 2025?

Solar panels generate “free” electricity, but installing a system still costs money. A typical American household needs a 10-kilowatt (kW) system to adequately power their home, which costs \$28,241 in 2025. That price effectively drops to \$19,873 after considering the full federal solar tax credit.

How much does a solar monitoring system cost?

**Monitoring System** A monitoring system typically costs around \$500 to \$1,000. Since it is for equipment safety, you can add this cost, too. The cost will be affected by its features and complexity, and an advanced one will be expensive. Although the initial investment in solar installation may seem significant, you can't skip it.

How much does a 5 kilowatt solar system cost?

The average national cost for a 5-kilowatt system ranges from \$14,000 to \$20,900, depending on the source and period of data. EnergySage reports that the average cost of a 10.8 kW solar panel installation is around \$29,926 before federal tax credits, which reduces to \$20,948 after the credits are applied.
