

**EQACC SOLAR**

# **Solar glass and EK glass**

## Overview

---

What is solar glass?

Solar glass is a type of glass that is specially designed to harness solar energy and convert it into electricity. It is made by incorporating photovoltaic cells into the glass, allowing it to generate power from sunlight. This innovative technology has gained popularity in recent years as a sustainable and efficient way to produce clean energy.

What is Photovoltaic Glass?

Photovoltaic glass is a special type of glass that utilizes solar radiation to generate electricity by laminating into solar cells, and has relevant current extraction devices and cables. The glass used in photovoltaic power generation is not ordinary glass, but TCO conductive glass.

Why is glass a technology platform for energy management & energy generation?

However, with the discovery of semiconductor materials and thin-film deposition processes, glass has become a technology platform for advanced energy management and energy generation applications. This is due to its ability to provide mechanical strength, chemical durability, and high transmission in the solar spectrum.

Can glass be used as a technology platform for solar energy?

The history of glass and coatings on glass as a technology platform for solar energy is captured in the timeline shown in Fig. 48.4. It begins with development of the float process for the high-volume manufacturing of low-cost, high-quality glass that became ubiquitous in the commercial and residential architecture of the 1960s.
