Solar glass system sun room

Overview

What is a solar room?

The solar was a room in many English and French medieval manor houses, great houses and castles, mostly on an upper storey, designed as the family's private living and sleeping quarters. Within castles they are often called the "Lords' and Ladies' Chamber" or the "Great Chamber".

How does Photovoltaic Glass work?

Photovoltaic glass operates on the same basic principle as any solar system: it converts sunlight into electricity. It uses solar cells made of materials such as amorphous silicon, crystalline silicon, or advanced thin-film technologies. These cells are encapsulated between layers of glass, making the product durable, safe, and functional.

What is solar glass used for?

Thanks to its versatility, solar glass can be used in a wide variety of construction settings—from residential homes to offices, factories, shopping centers, and more. Some of the most common applications include: These applications are ideal for maximizing solar capture and turning passive structures into active energy generators.

What is a solar canopy & how does it work?

The solar canopy acts as sunshading and is integrated with rainproofing features. Solarvolt building-integrated photovoltaic (BIPV) glass systems, available with a range of Vitro tinted and transparent glasses, can provide shade and minimize glare.
