

**EQACC SOLAR**

# **Solar grid-connected string inverter**

## Overview

---

What is a string inverter?

A string inverter, also known as an on-grid inverter or grid-tied solar inverter, converts DC power from solar panels into AC electricity for use. These string inverters work seamlessly with the electrical grid, ensuring high efficiency and compliance with anti-islanding protection.

What are 'string' solar inverters?

This review focuses on common 'string' solar inverters, the most popular type. These inverters use one or more strings (groups) of solar panels connected in series. String solar inverters are the most common type used in the UK, Europe, Australia, and Asia. They are also growing in popularity in the US, where microinverters are extremely popular.

How do inverters provide grid services?

In order to provide grid services, inverters need to have sources of power that they can control. This could be either generation, such as a solar panel that is currently producing electricity, or storage, like a battery system that can be used to provide power that was previously stored.

Who makes the best solar string inverter?

We review the best grid-connect solar inverters from the worlds leading manufacturers Fronius, SMA, SolarEdge, Fimer, Sungrow, Huawei, Goodwe, Solis and many more to decide who offers the highest quality and most reliable solar string inverters for residential and commercial solar.

## Solar grid-connected string inverter

### MPPT String Inverter, Three/Single Phase String Inverter

A string inverter, also known as an on-grid inverter or grid-tied solar inverter, converts DC power from solar panels into AC electricity for use. These string inverters work ...
