

EQACC SOLAR

Solar inverter data upload

Overview

Can a solar inverter be overloaded?

While most inverters have lower efficiency when underloaded, overloading the inverter may improve its weighted efficiency and lead to better yield.

How much DC overloading does a solar inverter allow?

All good solar inverter brands allow DC overloading in the range of 25% to 50%. The extent of DC Overloading is a balance between possible power clipping in ideal weather conditions and energy gain during less ideal conditions.

What is the average solar inverter loading ratio?

Inverter loading ratios are higher for larger solar power plants. At the end of 2016, smaller plants—those one megawatt (MW) or less in size—had an average ILR of 1.17, while larger plants—those ranging from 50 MW to 100 MW—had an ILR of 1.30. As solar plants have gotten larger, inverter loading ratios have increased.

How does our solar datalogger work?

ePowerLog Compact is a universal datalogger designed for solar energy systems with capacities under 500 KWp. Remote access & exportation of data: By using ePowerMonitor, or any other compatible third-party monitoring platforms.

Solar inverter data upload

Solar inverter datalogger - Mateusz Nowak

The communicator worker is responsible for retrieving data from the inverter, post-processing, saving to the database, and sending to the broker. It can ...
