

EQACC SOLAR

Solar inverter strip

Overview

What is a solar string inverter?

A solar string inverter plays a crucial role in solar power systems, converting direct current (DC) from photovoltaic (PV) panels into alternating current (AC) for use in homes, businesses, and industrial facilities.

How do PV inverters work?

PV inverters efficiently convert direct current (DC) power from solar panels into alternating current (AC), ensuring seamless energy integration into residential, commercial, and utility-scale power systems.

How do string inverters work?

These string inverters work seamlessly with the electrical grid, ensuring high efficiency and compliance with anti-islanding protection. SolaX offers single-phase and three-phase string inverters, ranging from 600W to 350kW, making them ideal for home solar systems, commercial solar projects, and large-scale solar farms.

How does a solar inverter work?

Please use a more recent browser. Solar inverters comprise a DC-DC conversion stage, to adapt voltage levels and implement the Maximum Power Point Tracking (MPPT) function, to maximize energy transfer from the panel and a DC-AC conversion stage to correctly shape current and voltage waveforms transferred to the AC grid.

Solar inverter strip

- LIQUID/AIR COOLING
- ON GRID/HYBRID
- PROTECTION IP54/IP55
- BATTERY /6000 CYCLES

MPPT String Inverter, Three/Single Phase String Inverter

A string inverter, also known as an on-grid inverter or grid-tied solar inverter, converts DC power from solar panels into AC electricity for use. These string inverters work ...
