# **Solar lighting in basement**

## Overview

---

What is the Best Lighting for a basement?

Recessed lighting is the best and most popular to illuminate a dark space without much natural light. These lights take up minimal space in the ceiling and can illuminate the entire basement evenly.

Should I add natural light to my basement?

With the upper floor and surrounding earth encroaching on the basement, bringing in natural light requires extra planning. While it's more difficult to introduce natural light than artificial light to the basement, the payoff is well worth it. Natural lighting is free and it gives this space a warm, relaxed feeling.

How does natural lighting work in a basement?

Natural lighting is free and it gives this space a warm, relaxed feeling. Sun tubes, light tubes, or solar tubes are large reflective tubes that collect sunlight at the roof and send it down to the basement for low-intensity natural lighting. Sun tubes aren't true skylights, so direct sunlight rarely reaches the basement.

How do you light up a basement?

You can accomplish lighting up your basement by simply placing floor lamps as needed or you can install them in the ceiling such as tray or recessed lighting. Wall lighting such as sconces or faux natural light windows are also an option. Here is all the information you'll need to add basement lighting in your home.
