# **Solar module a-level module standard**

## Overview

---

What are the new standards for solar photovoltaic modules?

New standards are under development including the standards for the quality of PV cables, junction boxes, connectors, module-integrated electronics testing and Packaging in the process of transport of modules. After several years of hard work, a draft document for standards on the Solar photovoltaic module system is going to release.

Do PV modules need to be updated?

As the work of IEC TC 82 has progressed, a number of new standards for PV components and balance of system equipment have been introduced. Accordingly, the requirements for the safety of PV modules must also be updated to reference these new standards and to fully leverage the benefits that can be achieved by compliance with their requirements.

Can a solar PV module be used in a corrosive atmosphere?

For the PV modules to be used in a highly corrosive atmosphere throughout their lifetime, they must qualify to IEC 61701/IS 61701. 4) The rated power of the solar Photovoltaic module shall have a maximum tolerance of up to  $\pm 3\%$ .

What is a Class 0 PV module?

This defines the following for PV modules: Class 0 modules have individual and/or system level electrical outputs at hazardous levels of voltage, current and power. These modules are provided with basic insulation only as provision for basic protection and have no provisions for fault protection.
