Solar module quality management

Overview

What is SMQs (solar module quality standard)?

As a generic text, this SMQS (Solar Module Quality Standard) series of specifications represents a way of simplifying the purchasing process: Requirements are described in general terms and a selection option for specifying the technical conditions to be agreed upon in the purchasing contract is defined.

What is a solar module?

Solar modules are the central component for the direct generation of electrical energy from natural sunlight through the photovoltaic (PV) effect and a central component of solar PV systems. Solar modules are manufactured as a mass product and are typically purchased in large quantities.

What is the international PV module quality assurance Task Force?

The International PV Module Quality Assurance Task Force was formed at the Forum to develop standards that can help customers quickly assess a PV product's ability to withstand regional stresses and to gain confidence that purchased PV products will be of consistent quality.

What is the international PV module quality assurance Forum?

The International PV Module Quality Assurance Forum was held in July of 2011 in San Francisco, organized and sponsored by the National Institute of Advanced Industrial Science and Technology (AIST), the National Renewable Energy Laboratory (NREL), the European Commission Joint Research Centre (JRC), and the SEMI PV Group.
