

**EQACC SOLAR**

# **Solar panel system design**

## Overview

---

How do I design a solar PV system?

To design a solar PV system, consider the following factors: Orientation - the direction the system will face. For existing buildings with sloping roofs, this is fixed and influences the system's viability. (In the UK, north-facing systems are generally not worthwhile.).

Why should you design a solar PV system?

The design of a solar PV system plays a crucial role in maximizing energy generation and optimizing system performance. This comprehensive guide will walk you through the key factors, calculations, and considerations in designing a highly efficient solar PV system.

How to choose a solar panel?

You also need to consider your electricity needs while looking for a solar panel. Solar panels utilize sun energy while converting it into electric energy. These are often termed as the "PV Panels" as well. It is worth noticing that the sunlight contains tiny particles of energy. These particles are called the "Photons".

## Solar panel system design

Voltage range:691.2-947.2V

>6000 cycles(100%DOD)

Rated battery capacity: 216KWH (customizable)

EMS communication: 4G/CAN/RS485

### How to Design Solar Panel System - Solar Panel Design Ideas

From the capacity of your solar system to the types of solar panels you will use, there are several factors to consider when creating an ideal solar panel design.
