

EQACC SOLAR

Solar panels for solar use

Overview

Do solar panels need a battery?

Solar panels are one part of a home energy system, but to maximize the energy they produce, you'll likely need a battery. A home battery or solar battery allows you to store energy collected by your solar panels and use it at times when the sun is not shining. Batteries also allow your home to go truly off-grid in the event of a power outage.

Why should I get solar panels for my home?

There are a handful of reasons to get solar panels for your home, but the biggest one is energy cost savings. Home solar is simply much cheaper than paying for grid electricity, and can lead to tens – sometimes hundreds – of thousands in savings over the warranty period of the panels.

What are solar panels used for?

Advanced materials and technologies are employed to ensure the durability and efficiency of these panels, allowing them to reliably operate in space for extended periods. Solar panels have a wide range of applications across sectors such as residential, commercial, industrial, agriculture, transportation, disaster relief, and space exploration.

Can solar panels power a home?

Solar panels are used to power everything from calculators to sports stadiums to satellites — and they can just as easily be used to power a home. You don't need to be a rocket scientist – or anything close to it – to get solar panels for your home.
