

**EQACC SOLAR**

# **Solar panels installed on the roof slope**

## Overview

---

Can you change the slope of solar panels?

You can change the slope of solar panels using tilt mounts despite imperfect roofs. The adjustable system configuration on these mounts allows you to select the best possible angle for your location to give you maximum energy generation. Ground-mounted solar systems should be your consideration when your roof does not meet the requirements.

How to install solar panels on the roof?

Here is a stepwise description of how to install solar panels on the roof: Solar rooftop panels are installed using solar mounts. Identifying the area for solar panel installation helps determine how many solar mounts you need. Also, while identifying the total rooftop area, you can specify the extent of shade-free area.

How to choose a solar roof?

Solar rooftop panels are installed using solar mounts. Identifying the area for solar panel installation helps determine how many solar mounts you need. Also, while identifying the total rooftop area, you can specify the extent of shade-free area. Ascertain the endurance capacity of the roof, as the solar panels are bound to weigh heavy on it.

Should a solar roof face south?

The angle and orientation of your roof significantly impact solar energy production. Ideally, solar panels should face south in the northern hemisphere for maximum sunlight exposure. If your roof doesn't face south, consider the available space and the possibility of installing panels on different sections.
