Solar panels on rooftops in Lithuania

Overview

Are rooftop solar PV systems useful in Lithuanian urban areas?

Thus, the results of the economic potential assessment show that rooftop solar PV systems have potential utility in Lithuanian urban areas, and could contribute to the implementation of national and EU level targets, especially those that are RES-related.

Does Lithuania have a solar PV system?

The total volume of solar PV systems in Lithuania was found to be small in comparison to other countries worldwide. In , it was estimated that the global technical potential of PV/T systems could reach up to 47.5 PWh, with the possibility of doubling this by 2060.

How much LCOE does a solar PV system cost in Lithuania?

Figure 12. LCOE values of solar PV systems on rooftops of selected building categories in Lithuanian urban areas (done by authors). As is shown in Figure 12, the estimated LCOE values of each financing strategy, with the minimum, maximum and average given, vary in the range of 2.34–5.25 EURct/kWh.

How to calculate the technical potential of rooftop solar PV systems?

According to this, the total technical potential of rooftop solar PV systems was calculated as a function of the number of candidate buildings, their area of suitable roofing for the installation of a solar PV system, and the ratio of the latter to a power unit, using Equation (1):
