# Solar panels on the house

## Overview

---

This beginner-friendly guide breaks down everything you need to know about solar power for house setups — including costs, savings, how systems work, and key differences for homeowners in the US, Canada, and the UK. Can solar panels power a home?

Solar panels are used to power everything from calculators to sports stadiums to satellites — and they can just as easily be used to power a home. You don't need to be a rocket scientist - or anything close to it - to get solar panels for your home.

How many homes have solar panels?

Over 4 million US homes now have solar panels (SEIA, 2024). Canada's solar capacity is projected to triple by 2030, driven by clean energy mandates (NRCAN, 2023). In the UK, the average home saves £400-£500 per year on electricity after solar installation (Energy Saving Trust, 2024).

Why should I get solar panels for my home?

There are a handful of reasons to get solar panels for your home, but the biggest one is energy cost savings. Home solar is simply much cheaper than paying for grid electricity, and can lead to tens - sometimes hundreds - of thousands in savings over the warranty period of the panels.

Will solar panels power my home at night?

But snow can be easily cleaned off or will melt quickly. Will my solar panels power my home at night?

No, your solar panels won't power your home at night. However, most home solar panel systems are sized to generate enough electricity during the day to cover the costs of nighttime energy usage under net metering.
