# **Solar power storage battery types**

## Overview

---

Which battery is best for solar energy storage?

Lithium-ion – particularly lithium iron phosphate (LFP) – batteries are considered the best type of batteries for residential solar energy storage currently on the market. However, if flow and saltwater batteries became compact and cost-effective enough for home use, they may likely replace lithium-ion as the best solar batteries.

What are the different types of solar batteries?

Solar batteries can be divided into six categories based on their chemical composition: Lithium-ion, lithium iron phosphate (LFP), lead-acid, flow, saltwater, and nickel-cadmium. Frankly, the first three categories (lithium-ion, LFP, and lead-acid) make up a vast majority of the solar batteries available to homeowners.

What are the different types of rechargeable solar batteries?

The six types of rechargeable solar batteries include lithium-ion, lithium iron phosphate (LFP), lead acid, flow, saltwater, and nickel-cadmium.

What type of battery should a solar system use?

Lithium-ion batteries are the most common type of battery used in residential solar systems, followed by lithium iron phosphate (LFP) and lead acid. Lithium-ion and LFP batteries last longer, require no maintenance, and boast a deeper depth of discharge (80-100%).
