

EQACC SOLAR

Solar water pump set for agricultural irrigation

Overview

What is a solar-powered pumping irrigation system?

A solar-powered pumping irrigation system utilizes solar photovoltaic (PV) technology to convert solar energy into electrical power, which drives pumps for water lifting and irrigation. This system does not rely on fossil fuels and avoids environmental pollution.

What is a solar water pump?

Our solar water pumps offer an efficient and sustainable solution for all farming and irrigation needs, whether for crops or vegetables, and regardless of land size. Designed to be cost-effective, Roto's solar pumps ensure reliable water distribution across various irrigation methods, making them ideal for diverse agricultural applications.

Can solar-powered water pumps be used for different types of crops?

Yes, solar-powered water pumps can be used for various types of crops. They can be integrated with different irrigation systems, such as drip irrigation, sprinklers, and flood irrigation, to meet the specific water requirements of different crops. Farmers should choose the appropriate pump size and capacity based on their crop needs and field size.

Can solar pumps be integrated with existing irrigation systems?

Yes, solar pumps can be easily integrated with existing irrigation systems on a farm. Whether using drip irrigation, sprinklers, or flood irrigation, solar pumps can provide the necessary water pressure and flow rate. Farmers should consult with experts to ensure proper installation and compatibility with their irrigation setup.
